

AERONAUTICAL TELECOMMUNICATIONS NETWORK PANEL

SECOND MEETING

Montreal 4th - 15th November 1996

Agenda Item 3: Development of the CNS/ATM-1 Package (SARPs and Guidance Material)

**Proposed Amendments to Draft ATN Internet SARPs
Internet Communications Service (Sub Volume 5)**

(Presented and Prepared By Akhil Sharma, Rapporteur WG2)

SUMMARY

This paper presents proposed amendments to the version of the draft ATN Internet SARPs (Version 6.0) that were submitted to ICAO in July 1996 for language translation. The proposed amendments will correct defects that have been identified by the on-going global validation process. All defects identified and associated change proposals have been thoroughly reviewed and agreed by WG2. The detailed change proposals are attached to this paper as Appendix A. It is recommended that the Panel review and, where agreed by the Panel, adopt the proposed changes.

1. Introduction

1.1 ATNP WG2 submitted Version 6.0 of the draft ATN Internet SARPs to ICAO for language translation in July 1996. These SARPs have been introduced to the Panel in ATNP/2-WPxx.

2. Discussion

2.1 Prior to submitting the draft ATN Internet SARPs to ICAO for language translation the WG2 had conducted a detailed review of the material to ensure, to the extent practicable, that the material was correct, consistent and complete.

2.2 Since then the on-going global validation of the draft SARPs (co-ordinated by WG2) material has identified a number of defects that require resolution. All such defects and the necessary proposed amendments to the draft SARPs text have been presented to and approved by WG2. In order to facilitate presentation of these defects and proposed amendments WG2 has categorised these defects as “technical” and “editorial”.

2.3 Due to the fact that the validation of the draft SARPs is nearing completion WG2 expects that future proposed amendemets will be few and of a minor impact nature.

2.4 Appendix A to this paper documents all WG2 agreed defects and associated proposed amendments which, it shoul be noted, are based upon Version 6.0 of the draft ATN Internet SARPs.

2. Recommendation

2.1 The Panel is invited to review and, where appropriate, agree the defects and associated proposed amendments documented in Appendix A to this paper in order to recommend their inclusion into the baseleine version of the material submitted to ICAO in July 1996.

**Appendix A - WG2 Agreed Defects and Proposed
Amendments to the draft ATN Internet SARPs
Version 6.0**
